Voluntary Results Feedback Form
> I am an examiner in Workgroup: Example: 1610
Relevant prior art found, search results used as follows:
☐ 102 rejection
☐ 103 rejection
☐ Cited as being of interest.
Helped examiner better understand the invention.
Helped examiner better understand the state of the art in their technology.
Types of relevant prior art found:
☐ Foreign Patent(s)
 Non-Patent Literature (journal articles, conference proceedings, new product announcements etc.)
> Relevant prior art not found:
Results verified the lack of relevant prior art (helped determine patentability).
Results were not useful in determining patentability or understanding the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    termed as fucosyltransferase) proteins and nucleic acids from various strains of Helicobacter pylori. This enzyme catalyzes the transfer of a fucose residue from a donor substrate to an acceptor substrate. The fucosyltransferase polymucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase protein.

                                                                                                                                                                                                                                      This is the amino acid sequence of the novel alpha-1,3-fucosyltransferase of Helicobacter pylori NCTC 11639, as deduced from the newly isolated fucT gene (see ANV80321). The enzyme is characterised by 8 C-terminal heptad repeats and by the lack of a transmembrane domain. The absence of a transmembrane domain allows the enzyme to be readily released from recombinant host cells. The enzyme can be used in the production of fucosylated oligosaccharides such as Lewis X, Lewis Y and sialyl Lewis X, which are structurally similar to certain tumour associated antigens found in mammals. These glycoconjugates also have research and diagnosis utility in the development of assays to detect mammalian tumours. The enzyme can also be used to raise specific antibodies. Inhibition of abnormal fucT gene product activity can be used for the treatment of intestinal mucosal disease. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated alpha-1-3-fucosyltransferase gene - obtained from Helicobacter pylori, used to develop products for the diagnosis treatment of intestinal mucosal diseases, e.g. tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 1999-059913/05.

```

```
The invention relates a purified transmembrane segment-free alpha 1,3-CC Greu-Argy, 3-x4-Tyr, where x1, x2-and x4 is Asp or Asn, and x3 is Cleu-Argy, 3-x4-Tyr, where x1, x2-and x4 is Asp or Asn, and x3 is Cleu-Argy, 3-x4-Tyr, where x1, x2-and x4 is Asp or Asn, and x3 is Cleu-Argy, x3-x4-Tyr, where x1, x2-and x4 is Asp or Asn, and x3 is Cleur-Argy, x3-x4-Tyr, where x1, x2-and x4 is Asp or Asn, and x3 is Cleur-Argy, x3-x4-Tyr, where x1, x2-and x4 is Asp or Asn, and x3 is Cleur-Argy, x3-x4-Tyr, where x1, x2-and x4-tyr, and x3 is Cleur-Argy, x3-x4-Tyr, which call a solution of the protein call and call and encoding the protein Cleur-Argy, and x3 is Cleur-Argy, x3-x4-Tyr, which call a solution relation and a gene expression system for producing transmembrane segment-free alphal, 3-fucosyltransferase, comprising a host cell modified with the nucleic acid or its contacting the protein with a substrate such as LacNac-R and GDP-fucose, and purifying the produced oligosaccharides, or by culturing the cell, contacting the protein with a substrate, to produce oligosaccharides and purifying the obtained oligosaccharides, or by culturing the cell, cas a probe for detecting the nucleic acid, by contacting a sample with a consider cell with a substrate, to produce oligosaccharides to alphal,3-fucosyltransferase polymucleotide, and detecting the nucleic acid, by contacting a sample with a constraint of the probe, or by culturing the colling the nucleic acid, by contacting a sample with a constraint cell is useful for producing a transmembrane segment-free alphal,3-fucosyltransferase fusion protein, by growing the host cell containing a correspondent and isolating the fusion protein and secretion of the protein of the fusion protein, by growing the host cell containing a correspondent of the protein in the sample. The presence of the protein in the sample is indicative of infection by Helicosomers. The antibody is useful conductions which allow expression and secretion of the protein in the sample in the development of assays to

CC (including the comblement or fragment), a vector containing the nucleic acid, a host cell containing nucleic acid or vector, an antibody which CC selectively binds to the protein and a gene expression system for CC producing transmembrane segment-free alphal, 3- fucosyltransferase, CC comprising a host cell modified with the nucleic acid or its C producing fucosylated oligosaccharides, such as LacNAc-R and GDP-fucose, CC contacting the protein with a substrate such as LacNAc-R and GDP-fucose, CC and purifying the bost cell with a substrate, to produce oligosaccharides, and purifying the obtained oligosaccharides, or by culturing the cell, cc contacting a caid probe for detecting the nucleic acid, by contacting a sample with a cc mucleic acid is useful contacting a probe for detecting hybridises to alphal, 3-fucosyltransferase CC amplifying the nucleic acid using polymerase chain reaction (PCR). The host cell is useful for producing a transmembrane segment-free alphal, 3-fucosyltransferase fusion protein, by growing the host cell containing a certain protein and isolating the fusion protein. The antibody is useful for detecting the protein in a sample. The presence of the protein in the sample is indicative of infection by Helicobacter pylori or the presence of malignant cells. The antibody is also useful for diagnosing disease, and for inhibiting abnormal alphal, 3-fucosyltransferase gene product activity. The nucleic acid is useful as gart of ribozyme and/or triple helix sequences and for alphal, 3-fucosyltransferase gene product activity. The nucleic acid is useful as gart of ribozyme and/or triple helix sequences and for alphal, 3-fucosyltransferase.
                       fucosyltransferase gene regulation. Oligosaccharides synthesised using the protein or cell are useful in the development of assays to detect mammalian tumours. The present sequence represents an H. pylori alphal, 3 fucosyltransferase encdoed by the fucT gene. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates a purified transmembrane segment-free alpha 1.3-fucosyltransferase polypeptide, having a repart of the sequence: X 1-X 2-fucu-Arg-X 3-X 4-Tyr, where X 1. X 2 and X 4 is Asp or Asn; and X 3 is Ise, Val or Ala. Also included are the nucleic acid encoding the protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Purified transmembrane segment-free alpha1,3-fucosyltransferase polypeptide useful for producing fucosylated oligosaccharides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       H. pylori alpha1,3 fucosyltransferase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     29-AUG-2003

CC (including tits complement or fragment), a vector containing the nucleic cold, a host cell containing nucleic acid or vector, an antibody which content and a gene expression system for comprising a host cell modified with the nucleic acid or its producing transmembrane segment-free alphal, 3 fucosyltransferase, cc comprising a host cell modified with the nucleic acid or its comparising a host cell modified with the nucleic acid or its comparising a host cell modified with the nucleic acid or its comparising the portion. The protein and cells are useful for contacting the protein with a substrate such as Lex, Ley or alex, by contacting the protein with a substrate, to produce oligosaccharides and purifying the host cell with a substrate, to produce oligosaccharides or and purifying the obtained oligosaccharides. The nucleic acid is useful can a probe for detecting the nucleic acid, by contacting a sample with a nucleic acid probe that hybridises to alphal, 3-fucosyltransferase cell is useful for producing a transmembrane segment-free alphal, 3-fucosyltransferase. The nucleic acid using polymerase chain reaction (PCR). The host cell is useful for producing a transmembrane segment-free alphal, 3-fucosyltransferase gene producing a transmembrane segment-free alphal, 3-fucosyltransferase gene producing a transmembrane segment-free alphal, 3-fucosyltransferase gene product activity. The nucleic acid is useful for detecting the protein in a sample. The presence of the protein in the sample is indicative of infection by Helicobacter pylori or the presence of malignant cells. The antibody is also useful for diagnosing disorders and monitoring disease, and for inhibiting abnormal alphal, 3-fucosyltransferase gene product activity. The nucleic acid is useful as gart of ribozyme and/or triple helix sequence and for alphal, 3-fucosyltransferase gene regulation. Oligosaccharides synthesised using the protein or cell are useful in the development of assays to detect mammalian tumours. The present sequence and for alphal, 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates a purified transmembrane segment-free alpha 1,3-fucosyltransferase polypeptide, having a repeat of the sequence: X_1-X_2-fucosyltransferase polypeptide, having a repeat of the sequence: X_1-X_2-fucosyltransferase polypeptide, having a repeat of the sequence: X_1-X_2 and X_4 is Asp or Asn; and X_3 is Leu-Arg-X_3-X_4-Tyr, where X_1, X_2 and X_4 is Asp or Asn; and X_3 is Lie. Val or Ala. Also included are the nucleic acid encoding the protein lie, Val or Ala. Also included are the nucleic acid encoding the protein lie.

ID ABG308 CC fucosyltransferase polypeptide, having a repeat of the sequence: X 1-X 2-CC Leu-Arg-X 3-X 4-Tyr, where X 1, X 2 and X 4 is Asp or Asn; and X 3 is C including its complement or fragment), a vector containing the protein CC (including its complement or fragment), a vector containing the protein CC acid, a host cell containing nucleic acid or vector, an antibody which CC selectively binds to the protein and a gene expression system for CC producing transmembrane segment-free alphal, 3- fucosyltransferase, CC comprising a host cell modified with the nucleic acid or its comprising the protein with a substrate such as Lex, Ley or sLex, by CC contacting fucosylated oligosaccharides, such as Lex, Ley or sLex, by CC contacting the protein with a substrate such as Lex, Ley or slex, by CC contacting the protein with a substrate, to produce oligosaccharides, or by culturing the cell with a substrate. The nucleic acid is useful as a probe for detecting the nucleic acid, by contacting a sample with a nucleic acid probe that hybridises to alphal, 3- fucosyltransferase gene producing a transmembrane segment-free alphal, 3- fucosyltransferase fucosyltransferase fucosyltransferase gene producing a transmembrane segment-free alphal, 3- fucosyltransferase gene producing a transmembrane segment-free alphal, 3- fucosyltransferase gene product activity. The nucleic acid is useful as cut in a sample. The presence of the protein in the contacting a fucosyltransferase gene product activity. The nucleic acid is useful as gart of ribozyme and/or triple helix sequences and for alphal, 3- fucosyltransferase gene regulation. Oligosaccharides synthesised using the protein or cell are useful in the development of assays to detect cut fucosyltransferase encoded by the fucosyltransferase and for alphal, 3- fucosyltrans The invention relates a purified transmembrane segment-free alpha 1,3-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to novel isolated polynucleotides and the encoded polypeptides thereof, which are related to the fucosyltransferase enzymes (FutA and FutB) of Helicobacter pylori (H. pylori). Specifically, it refers to alpha 1-3/4 fucosyltransferase enzymes that can be used to chemically synthesise glycopyroteins and glycolipids with the desired oligosaccharide moieties (i.e. by transfer of a fucose residue to N-acetylglucosamine), such that they are useful in the preparation of glycoconjugates. The present invention describes how bacterial fucosyltransferase is unaffected by the sialyation status of the acceptor sugar, as opposed to the mammalian homologue, and furthermore, bacterially expressed enzymes offer a large cost saving relative to mammalian expression systems. This polypeptide sequence is an H. pylori strain 1218 FutB protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 485 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 16; SEQ ID NO 6; 72pp; English.

This enzyme catalyzes the transfer of a fucose residue from a donor substrate to an acceptor substrate. The fucosyltransferase polynucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The prese sequence is Helicobacter pylori fucosyltransferase protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 1; SEQ ID NO 6; 97pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             polypeptides thereof, which are related to the fucosyltransferase enzymes (FutA and FutB) of Helicobacter pylori (H. pylori). Specifically, it refers to alpha 1-3/4 fucosyltransferase enzymes that can be used to chemically synthesise glycopyroteins and glycolipids with the desired oligosaccharide moieties (i.e. by transfer of a fucose residue to N-acetylglucosamine), such that they are useful in the preparation of glycoconjugates. The present invention describes how bacterial fucosyltransferase is unaffected by the sialyation status of the acceptor sugar, as opposed to the mammalian homologue, and furthermore, bacterially expressed enzymes offer a large cost saving relative to mammalian expression systems. This polypeptide sequence is an H. pylori strain 1182 FutB protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated polynucleotide encoding fucosyltransferase protein, useful for synthesizing oligosaccharide moiety on a protein or lipid that is unglycosylated in its native form or for synthesizing glycolipids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Helicobacter pylori.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      alpha-1;
fucosyl;
                                                                             This sequence represents an alpha-1,3/4-fucosyltransferase protein which was used in the method of the invention for producing a fucosylated glycoprotein. The method involves contacting a recombinant fucosyltransferase protein with a mixture comprising a donor substrate which comprises a fucosyl residue, and an acceptor substrate on a glycoprotein, under conditions such that the fucosyltransferase protein catalyzes the transfer of the fucose residue from a donor substrate to catalyzes the transfer on the glycoprotein. The method is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Alpha-1,3/4-fucosyltransferase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ADJ27345;

This enzyme catalyzes the transfer of a fucose residue from a donor substrate to an acceptor substrate. The fucosyltransferase polymucleotides and polypeptides are useful for the synthesis of oligosaccharides, glycoproteins and glycolipids. The present sequence is Helicobacter pylori fucosyltransferase protein.

Ce enzymatically active portion. The protein and cells are useful for contacting fucosylated oligosaccharides, such as Lex, Ley or sLex, by CC contacting the protein with a substrate such as LacNAc-R and GPP-fucose, CC and purifying the produced oligosaccharides. The nucleic acid is useful cell, CC contacting the host cell with a substrate, to produce oligosaccharides and purifying the produced oligosaccharides. The nucleic acid is useful cell as a probe for detecting the nucleic acid, by contacting a sample with a nucleic acid probe that hybridises to alphal,3-fucosyltransferase cell is useful for producing a transmembrane segment-free alphal,3-fucosyltransferase-fusion protein, by growing the host cell containing a vector operably linked to a polynucleotide encoding a desired polypeptide or peptide under conditions which allow expression and secretion of the fusion protein and isolating the fusion protein. The antibody is also useful for diagnosing disease, and for inhibiting abnormal alphal,3-cc fucosyltransferase gene product activity. The nucleic acid is useful as part of ribozyme and/or triple helix sequences and for alphal,3-cc fucosyltransferase gene product activity. The nucleic acid is useful as part of ribozyme and/or triple helix sequences and for alphal,3-cc fucosyltransferase gene regulation. Oligosaccharides synthesised using the protein or cell are useful in the development of assays to detect fucosyltransferase encoded by the fuco gene. (Updated on 29-AUG-2003 to standardise of Sfield)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

Specifically, it refers to alpha 1-3/4 fucosyltransferase enzymes that can be used to chemically synthesise glycoproteins and glycolipids with the desired oligosaccharide moieties (i.e. by transfer of a fucose residue to N-acetylglucosamine), such that they are useful in the preparation of glycoconjugates. The present invention describes how bacterial fucosyltransferase is unaffected by the sialyation status of the acceptor sugar, as opposed to the mammalian homologue, and furthermore, bacterially expressed enzymes offer a large cost saving relative to mammalian expression systems. This polypeptide sequence is an H. pylori strain 26695 FutA protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated polymucleotide encoding fucosyltransferase protein, us for synthesizing oligosaccharide moiety on a protein or lipid that unglycosylated in its native form or for synthesizing glycolipids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Helicobacter pylori
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Helicobacter pylori strain 26695 FutA protein SeqID

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             뮍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5
                                                 This sequence represents an alpha-1,3/4-fucosyltransferase protein which was used in the method of the invention for producing a fucosylated glycoprotein. The method involves contacting a recombinant fucosyltransferase protein with a mixture comprising a donor substrate which comprises a fucosyl residue, and an acceptor substrate on a glycoprotein, under conditions such that the fucosyltransferase protein catalyzes the transfer of the fucose residue from a donor substrate to the acceptor substrate on the glycoprotein. The method is useful for
                                                                                                                                                                                                                                                                                                                                            Producing fucosylated glycoprotein, by contacting recombinant fucosyltransferase protein with mixture comprising donor substrate acceptor substrate on glycoprotein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       23-JUL-2002;

Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.
